WHY SUB-CATEGORIES MUST BE JAVASCRIPT PILLS (NOT SEPARATE FOLDERS): If you create 65 separate sub-category HTML pages before having content inside them, Google Search Console will flag your domain for *Soft 404 / Thin Archive Pages*. By using only **5 Main Category Hub Pages** and filtering sub-categories instantly via JavaScript buttons (**[All]** **[Air Fryer]** **[Baking]**), every hub page stays rich with content and 100% indexable from Day 1.

ZERO CANNIBALIZATION RULE: From your original 1,000 list, **exclude all 323 "- Quick Reference" duplicates** (#101–#200, #299–#396, #677–#801). Every single URL on Hoorvia.net must target a 100% unique primary search intent.
